Day 1

Tuesday 1st July

London Stansted – Pola de Somiedo. Weather: Overcast & light showers.

We left a sunny and rather warm England, starting our journey flying from Stansted airport to Asturias airport on time. Once we all gathered together at the arrival gate, we loaded our bags in our van and drove south towards Somiedo Natural Park. The afternoon was overcast, and became drizzly as soon as we entered into the Somiedo Natural Park, where we arrived at the village of Pola de Somiedo towards the late afternoon. We checked in to our family-owned hotel, and we gathered together again after a settle-in time. We discussed the plan for the week ahead and then we headed to our restaurant, checking the village river where we had wonderful views of a resident White-throated Dipper and Grey Wagtail. Once at Casa Miño restaurant, we enjoyed of fantastic local food and wine!

Day 2

Wednesday 2nd July

Castro trail – Perlunes. Weather: Overcast and wet morning; dry afternoon.

We started our first day with fairly good weather before breakfast, which gradually became overcast by the time we set off to the field. We drove a short distance from Pola de Somiedo to the point known as La Ruta de Castro (Castro trail), from where we started a long walk towards the village of the same name, following a typical “Vaqueiros” track. We found a few Griffon Vultures sheltered in the many caves of the impressive crags that surrounded the place; and also a flock of passerines which had plenty of Long-tailed Tits, Coal Tits, Western Bonelli’s Warbler and Firecrest, amongst others. A light drizzle covered the whole valley in the mid-morning, followed by a light rain, which came along with us for of our final portion of the track, descending into the village of Castro by noon, giving us a good excuse to find the local bar open to enjoy a good local coffee! As the weather kept drizzly, we decided to have our picnic lunch indoors, thus we drove back to our hotel and set it up in the reception/bar area.

After lunch and a short break, weather seemed to improve dramatically, so we continued with our plan by driving to the village of Perlunes where we took a good scroll across this entire interesting village, watching the friendly few inhabitants who were very welcoming and nice to us. We saw a good number of orchids and other interesting flowers on this walk, alongside good birds such as Short-toed Treecreeper, Eurasian Jay and Bullfinch, amongst others. The walk down the road produced Rock Bunting, Crag Martins, Red-billed Chough, Griffon Vultures, Common Buzzard, Rock Bunting, and a

very obliging juvenile Goshawk which perched on one of the crags by the edge of the beech forest. The sun came out for a good twenty minutes, bringing some good thermals for raptors such as Common Buzzards and Griffon Vultures, and attracting a very beautiful Golden Eagle we all enjoyed seeing.

The late afternoon turned back into a overcast and grey one, but at least dry, and it was time to start our drive back to our hotel in order to get ready to do our checklist, and then for a delicious local supper at Casa Miño.

Day 3

Thursday 3rd July

Valle del Lago – Braña de Sousas (1,650 metres). Weather: Nice & sunny morning; overcast and light showers in the afternoon.

We woke up today to a very beautiful sunny morning, having an early breakfast and setting off to the eastern valley of Valle del Lago, home of our local botanist guide Gloria, who was already waiting for us there in order to start our long and picturesque walk towards Brañas de Sousas. We started our walk at Valle de Lago, located at nearly 1,500 metres above the sea level, doing a loop from the bottom of the village up to the track which leads to the high end of the impressive glacial valley, with lush meadows, beech forest and impressive rocky crags which offered fantastic views of beautiful flowers, butterflies and a variety of birds such as Garden Warbler, Yellowhammer, Rock Bunting, Tree Pipit, Red-billed Chough, Eurasian Stonechat, Black Redstart and Mistle Thrush. We gradually walked up the top of the trail, passing the tree-line and getting to the open alpine meadows where we found a very nice patch of grass to have our packed lunch, amongst the heather and shrubs, overlooking the beautiful gulley and high rocky hilltops.

A good number of birds were seen on the way down, including Griffon and Egyptian Vultures, Common Buzzard and Short-toed Snake Eagle; we also found a beautiful male Iberian Rock Lizard lunching on a small beetle. The rain was coming over, and the dark clouds gradually covered the mountains, and eventually some light showers spread over the whole valley. We trekked back to the village of Valle del Lago, in order to have a break and an afternoon coffee at Gloria's camping area. We then walked down the main road towards the village car park where our van was, making a couple of stops to check some other wildlife, getting good views of a Roe Deer with her very newly born fawn.

We drove back to the village in order to take a break, and we then gathered together again to do our checklist of the day, followed by a delicious dinner at our hotel's restaurant Casa Miño.

Day 4

Friday 4th July

Saliencia Valley (Altos de la Farrapona 1,785 metres) – La Peral. Weather: Sunny

We started today with another fairly early breakfast, on another beautiful sunny morning! We left Pola de Somiedo straight after breakfast, heading northeast and into the Saliencia Valley, located at 1,785 metres above sea level, and we were about to be walking to the highest point on the trip. The clear sunny day gave us great views of La Farrapona, an underground water lake system, surrounded by alpine crags and rocky beds, an ideal habitat for many good species. We started our walk down from

the car park, along the dirt and rocky track, where we enjoyed watching good birds such as Rock Bunting, Hedge Accentor (Dunnock), Crag Martins, Serin, Common Chiffchaff and Black Redstart. The loud voice of a Eurasian Cuckoo made us scan the patch of bushes and trees below the track, finding a pair of them actively calling! We continued our walk along the lake, where we found a very obliging Water Pipit, more Black Redstarts, Linnets, Crag and House Martins, and many interesting flowers and butterflies, while the noisy calling produced by Red-billed Choughs was a non-stop rhythmic noise for us to follow. By the time we hit the steep part of the trail, Northern Wheatears and a pair of Alpine Accentors kept us amused during our resting stops. Suddenly a colourful Wallcreeper flew over our heads, and we luckily grabbed good views of this wonderful and always difficult-to-see bird. We quickly walked around the cliff, going straight to the heart of the old iron quarry, but we didn't see it again; dozens of Red-billed Choughs and Alpine Choughs flew into the mine instead.

We finally reached the top, where seasonal-water lakes blended beautifully with the high alpine landscape, a great place to take a good break before starting our descending walk. We had good views of a pair of Little Grebe, Black Kite, and another Wallcreeper flying over our heads with some food on his beak! We started our walk back to the car park, still amused by the Alpine Accentors, Water Pipits, Red and Alpine Choughs, Black Redstarts, and many other birds flitting along our way. Once at the car park, we enjoyed our picnic lunch overlooking a breath-taking landscape! After lunch, a quick exploration of the track into the Leon province produced a pair of Egyptian Vultures and over a dozen of Apollo butterflies, which are always great to see! By the mid-afternoon, we started our drive towards Pola de Somiedo, making a stop in order to check a few picturesque brañas (vaqueiros/local cowboys' hats) which also produced more interesting butterflies. We then arrived to our hotel in order to take a good break before enjoying a delicious dinner!

After supper, we got ready to go back to the field to do some bear watching. We drove to a point known as Llamardal, from where we scanned till our patience and dedication were paid off with excellent views of a lovely and big Brown Bear, drifting along the high mountain vegetation and boulders...superb!! We all enjoyed watching this wanted mammal through the scope for a good fifteen minutes! The bear continued his scroll over the high hilltops and we drove back to Pola very satisfied and happy after our successful evening!

Day 5

Saturday 5th July

Pineda – Villar de Vildas – San Lorenzo Pass. Weather: Mixed sunny & overcast.

The weather was a bit unsettled today, but we found a nice spot over the valley to have a good walk. We drove heading north, stopping right at the entrance of the road which leads to Pineda, where we left our vehicle and set off for an uphill walk to the village. The activity was a bit slow along this valley, but we managed to see some interesting butterflies, Red Deer and Chamois, and birds such as Firecrest, Goshawk, Griffon Vultures and Serin, amongst others. We got to the top of the road where the village of Pineda lies; it is a hamlet with only two inhabitants living there throughout the year! After enjoying the views of the valley from this very traditional-looking little village, we started our walk back to the van and then we drove to the village of Villar de Vildas where we found a nice picnic spot by the river,

moving to the area of Puerto de San Lorenzo (San Lorenzo Pass) afterwards, where birds included Yellowhammers and Griffon Vultures.

The weather became overcast and we moved towards Pola de Somiedo in the late afternoon in order to take the usual break, follow by another delicious local dinner!

Day 6

Sunday 6th July

Babia Valley – Llamardal. Weather: Wet morning; dry afternoon.

After having our breakfast, we drove up the valley and south into the province of Leon, eventually reaching the Valley of Babia. The weather was wet at times, but definitively better than Somiedo, where the rain was heavy when we left. And wet was a lovely Rufous-tailed Rock Thrush we saw on the way down, and near the village of Piedrafita de Babia. Then we continued on the main road, from where we saw many White Storks and Common Buzzard, amongst others. We arrived at La Luna Dam where we saw Great Crested Grebe, Mallard and a beautiful male Red-backed Shrike, perched on a bush next to the shore. The rain started again so we drove back into the Babia valley, in order to take a walk along the river. In spite of the rain, this produced a few interesting birds such as Meadow and Tree Pipits, Rock Bunting, Yellowhammer, Short-toed Treecreeper, Western Bonelli's Warbler, and Honey Buzzard. We then drove back to the village of Piedrafita de Babia in order to have lunch at Monte Cancedo, a very nice pine woodland area from where we got great views of the valley.

After lunch, we took a little walk up the track and along the pine woodland but it was quite slow and quiet, so we decided to drive back to Somiedo, where the weather had improved dramatically. En route, we made a stop in the village of Llamardal, from where we scanned the mountains and hilltops in case a big carnivore should turn up. We checked all the visible hilltops and gullies, but a thin fog covered some of them at times, making our task difficult. The weather overcast, so we drove back to our hotel for a break, checklist and a delicious local dinner at Casa Miño.

Day 7

Monday 7th July

La Peral – Puerto de Somiedo (Somiedo Pass)

Weather: Dry & cloudy. Mainly sunny with chill wind.

After breakfast, we set off heading south to the village of La Peral, where we started a walk from the village towards the hilltops, enjoying the spectacular views of the whole valley, mountains and interesting wildlife such as a large group of Chamois, Hen Harrier, Red-backed Shrike, Common Whitethroat, and lots of Apollo butterflies while we were on the top of the mountains. The views of the valley and of El Cornón (the highest peak in Somiedo, 2,190 metres) were fantastic and breathtaking, alongside with the daily activity of the valley, its cows, shepherds, wildlife, etc.

By noon, we started our walk down back to the hamlet of La Peral, from where we drove further south – and higher – to the village of Puerto de Somiedo (Somiedo Pass) where we enjoyed a delicious picnic lunch, followed by a walk around the mountain, where we spotted interesting butterflies and a few bird

species such as Hen Harrier, Short-toed Snake Eagle and Peregrine Falcon, amongst others. We continued walking amongst the broom and heather, and we even had a moment of rest in the high meadows, while enjoying the beautiful views of the Babia Valley in the distance.

After this very interesting visit, we drove back to Pola in order to take a break and to enjoy our very last dinner together, which was once again very delicious!

Day 8

Tuesday 8th July

La Peral - Pola de Somiedo – Asturias Airport to Stansted. Weather: Chilly start; then sunny and warm

We had a very early start this morning in order to drive to the village of La Peral, from where we scanned the hilltops and meadows in search of mammals. We didn't see any large carnivores, but we had great views of Chamois grazing along the meadows and walking on top of the hilltops, looking around as though they were guarding the valleys from any threat. It was a chilly morning, in spite of the sun which was already up and shining; the mountains looked quiet and, as there was no sign of any of our major targets, it was time to drive back to Pola in order to have a late breakfast/brunch. We then had enough time to pack all our belongings, in order to start our drive to Asturias airport.

Another trip for us which had come to an end; although a very happy one, we were slightly sad to be leaving behind this wonderful area of high meadows and mountains. A very unknown and unexplored area for the average visitor, we were fortunate to be in the heart of this unique spot of northern Spain. Somiedo is a truly hidden jewel of the Cantabrian Mountains, a place which shared its wonderful wildlife, landscapes, gastronomy, kind people and culture. A place which took our minds away for a week and transported us to a different level of enjoyment, which will remain in our hearts and minds for ever, and might bring us back again some time for a second visit. Definitely a place to come back, to the beautiful landscapes and wildlife of Somiedo Natural Park...
