Tour participants: Adrian Langdon and Stephen Buckle (leaders) with 13 Naturetrek clients

Summary

Our eight-day spring tour of the Isles of Scilly once again provided a memorable exploration of Britain's most south-westerly archipelago. Blessed with fine weather for the duration of the trip, the group enjoyed calm seas, excellent visibility and a wonderful variety of wildlife across the islands.

Travelling between St Mary's, St Agnes, Bryher, Tresco and St Martin's, we experienced superb seabird encounters, exciting migrant birds and the rich flora that makes Scilly so special in springtime. Highlights included close views of Puffins, Razorbills and Guillemots around Annet and the Western Rocks, a Woodchat Shrike on Bryher, five Turtle Doves on St Mary's, and a brief but memorable Golden Oriole.

Marine life added further excitement, with Bottlenose Dolphins greeting us in Mount's Bay and Atlantic Grey Seals seen regularly around the islands. Throughout the week the islands were alive with bird song, wildflowers and dramatic coastal scenery, while the relaxed pace of island life, excellent cafés and welcoming hospitality all contributed to another unforgettable Scillonian adventure.

Day 1

Monday 4th May

Tour leaders Adrian and Stephen met ten of the group at the wharf in Penzance for the early morning sailing aboard Scillonian III to St Mary's. A further three clients were met on the island, having flown the short distance from Land's End.

Conditions in Mount's Bay were exceptionally calm and clear, providing excellent wildlife viewing from the outset. Before leaving the harbour, we enjoyed superb views of a Great Northern Diver, Rock Pipits and a flock of approximately seventy-five Purple Sandpipers gathered along the outer harbour wall on the high tide. A Great Skua was also seen moving purposefully across the bay.

Shortly after departure, several Bottlenose Dolphins broke the surface on the flat calm sea. As we neared Land's End, increasing numbers of Manx Shearwaters appeared, accompanied by small numbers of Gannets and Kittiwakes. Although seabird numbers were lower than expected due to the lack of wind, there was still plenty to enjoy during the crossing.

Approaching St Mary's, Scillonian III entered via Crow Sound, where Shags, Cormorants and Oystercatchers were seen scattered across the rocky islets. The harbour at St Mary's was exceptionally busy, with large crowds gathering to board the return sailing, following the World Pilot Gig Championships, which had been held over the Bank Holiday weekend.

We made our way to the Star Castle Hotel on the Garrison, dropping off our day bags before heading into Hugh Town for coffee. Sitting above Porthcressa Beach in the warm sunshine, the group discussed plans and expectations for the week ahead.

Later in the morning, we took a walk up Buzza Hill and along King Edward's Lane, passing the hospital before continuing toward Peninnis Head. We searched unsuccessfully for a recently reported Turtle Dove, but enjoyed sightings of Linnets, Stonechats, Meadow Pipits and Wheatears among the coastal heath and granite outcrops.

Returning to the hotel in the afternoon, guests checked into their rooms and had time to relax before regrouping at 3.30pm for an introductory walk around the Garrison. The day concluded with an enjoyable evening meal at the Star Castle Hotel, and anticipation for the adventures ahead.

Day 2

Tuesday 5th May

Our objective for today was to visit the important seabird island of Annet, before continuing to St Agnes. Having boarded the Kingfisher in the morning sunshine, we set off on a seabird safari around the Western Rocks and the outer islands. As we approached Annet, the first Puffins of the trip were spotted sitting on the water and flying low across the swell, much to the delight of the group. Alongside them were numerous Razorbills and Guillemots, while nesting Fulmars occupied ledges on the granite outcrops. Several Atlantic Grey Seals watched us curiously from the water as the boat carefully navigated around the rocks.

We encountered increasing numbers of Puffins both rafting offshore and standing on the islands, accompanied by many more seals hauled out across the islands. Sea conditions further west proved too rough safely to reach Bishop Rock Lighthouse, but there was still plenty of wildlife to enjoy, including Gannets circling and plunge-diving close to Melledgan. Purple Sandpipers and Turnstones were also noted feeding along the tideline.

Later in the day, we landed at Perconger Quay on St Agnes, and made our way to the Turk's Head Inn for lunch. As we sat in the garden overlooking the sea, many agreed that the setting must surely rank among the finest pub views anywhere in Britain.

After lunch, we walked around the Great Pool via Porth Killier, where sightings included Shelducks, Coots, Lesser and Great Black-backed Gulls, and additional Wheatears. The strandline was alive with feeding birds, with large numbers of Blackbirds and Swallows actively foraging among the washed-up seaweed and other debris.

No visit to St Agnes would be complete without a stop at Troytown Farm Dairy, and the group happily sampled the locally made ice creams before making our way back to Perconger Quay to meet the 4.45pm boat, which returned us to St Mary's after a memorable day.

Day 3

Wednesday 6th May

With the fine weather continuing, we decided to spend the day exploring the island of Bryher. Our boat for the day was Britannia: our departure was timed slightly later in the morning, as landings on Bryher are heavily dependent upon the tides. Having disembarked at Anneka's Quay, we immediately set off toward the northern end of the island, following reports of a Woodchat Shrike near the campsite sports field.

After a few false starts and some careful searching, the bird was eventually located, perched prominently on the goalposts beside the campsite. It subsequently moved between sycamore trees and bramble patches, allowing

everyone excellent views. This attractive southern European migrant proved to be one of the wildlife highlights of the week.

We later crossed the island toward Popplestones and the Great Pool, finding a sheltered spot out of the wind, where we paused for our packed lunches. Around the shoreline, we observed good numbers of Whimbrels and Oystercatchers, while the Great Pool itself held two Gadwalls, a Common Sandpiper, and two Moorhens with chicks.

After lunch, we continued our walk around the coast, calling in at Richard Pearce's art gallery, where many admired the paintings depicting classic Scillonian landscapes and seascapes. Further round the lower slopes of Samson Hill, Stephen picked up a distant Kestrel through his telescope, while Linnets, Stonechats and Whimbrel were noted along the heathland and shoreline. Dominating the skyline throughout the afternoon was the large cruise ship *Ambassador Ambience*, anchored offshore in the bay and visible from much of the island.

Before returning, the group enjoyed refreshments at the Fish Café on Bryher, making the most of another warm and sunny afternoon before boarding *Britannia* for the journey back to St Mary's.

Day 4

Thursday 7th May

Today's destination was the island of Tresco, with travel aboard *Meridian*. Owing to the state of the tides, we landed at New Grimsby before walking across the island to the Great Pool. The freshwater pools and reedbeds were particularly active, and from the two excellent bird hides on the northern side of the pool we listened to Reed Warblers singing loudly from deep cover within the reeds. Pairs of Gadwalls and Pochards were observed, the latter with newly hatched ducklings, providing delightful close views for the group.

At lunchtime, the whole party gathered at the Abbey Gardens café, where Red Squirrels ran confidently between the outdoor tables and chairs, entertaining guests as we enjoyed lunch in the sunshine.

In the afternoon, eleven of the clients visited the world-famous Tresco Abbey Garden, while Adrian and Stephen accompanied the remaining guests on a walk to Pentle Bay, in search of waders. Although birds proved rather scarce, we enjoyed good views of a Great Northern Diver offshore in the bay, along with several Whimbrels feeding along the shoreline. A Kestrel was also observed hovering over the marram grass dunes. Around the island were huge stacks of timber, from trees blown down during the severe winter gales that had battered Cornwall and the Isles of Scilly over recent months.

Later, around Abbey Pool, we encountered further Whimbrels, along with Mute Swans accompanied by cygnets. Reuniting with the remainder of the group after their visit to the gardens, we took a leisurely walk back across the airfield toward the quay at Carn Near, where *Meridian* collected us for the return journey to St Mary's, after another enjoyable day exploring the islands.

Day 5

Friday 8th May

Following an early morning walk around the Garrison after breakfast, we boarded our boat, the Sapphire, for a seabird safari exploring the Northern Isles and the waters around Round Island, Men-a-Vaur, St Helen's, Tean and the north side of Tresco.

The trip produced excellent close-up views of seabirds, as the skipper skilfully manoeuvring the boat among the rocky islands. Puffins were particularly active and frequently surfaced alongside the vessel, delighting everyone aboard. Razorbills, Guillemots, Shags and Cormorants were all seen at close range, while Purple Sandpipers and Turnstones occupied the wave-washed rocks.

A surprise highlight came in the form of a Marsh Harrier flying over St Helen's, while the more familiar Grey Heron was also noted. Around the northern end of St Martin's, we located a Raven's nest, and enjoyed good views of a Raven in flight over the cliffs.

Eventually, we landed at Higher Town on St Martin's, and headed directly for St Martin's Bakery, where Adrian had pre-ordered traditional Cornish pasties for the group. Sitting outside on the picnic benches in the warm sunshine, accompanied by wheeling Swallows and the constant chatter of House Sparrows, made for a thoroughly enjoyable lunch stop.

Afterwards, we took a leisurely walk up to the Daymark on the headland, searching for a reported Dartford Warbler. After some patient scanning, one of the group finally located the bird, and Stephen was able to get the telescope onto it, allowing everyone excellent close-up views as it moved through the gorse. From the Daymark, we enjoyed magnificent panoramic views back across the sea toward Land's End and the West Cornwall mainland, which shimmered in the distance.

We later wandered down through Middle Town and Lower Town at a relaxed pace, taking in the flowers and island scenery, before boarding the boat for our return journey to St Mary's.

Day 6

Saturday 9th May

Today was devoted to exploring St Mary's itself, at a more relaxed pace. Following breakfast, we left the Garrison via Sally Port and walked down onto Porthcressa Beach, where numerous Starlings and House Sparrows were feeding busily along the strandline. We followed the footpath up through Buzza Hill before continuing down to Old Town. Bird life around the beach and shoreline was quiet, although we enjoyed watching a Cormorant fishing offshore, along with several Oystercatchers feeding among the rocks.

We spent some time exploring the attractive churchyard at Old Town Church, where several members of the group were particularly interested in visiting the grave of the late Prime Minister, Harold Wilson. The churchyard was full of bird activity, with Starlings feeding young in holes in the old trees. Along the upper beach, we examined several strandline plants, and were especially pleased to find Sea Kale growing.

Coffee and cake at Pom's Café in Old Town provided a welcome break, before we continued our walk back through Lower Moors Nature Trail. The two hides among the reedbeds proved especially productive, giving us

excellent views of a Reed Warbler singing prominently from the tops of the reeds. Nearby, a Moorhen shepherded two young chicks through the pools, while Goldfinches, Linnets, Robins and Great Tits bathed in the shallow water. A Goldcrest was heard and briefly seen in nearby vegetation.

Having emerged onto Telegraph Road, we walked up to Longstone Café, where some of the group paused for lunch. Meanwhile, others made the short detour along Sandy Lane, following reports of Turtle Doves in one of the nearby cultivated fields. We were rewarded with exceptional views of five Turtle Doves feeding alongside a Stock Dove, several Wood Pigeons and around twenty House Sparrows: it was undoubtedly one of the highlights of the tour.

After regrouping at the café and swapping over, those who had lunched first went to see the Turtle Doves, while the remainder of the party searched nearby gardens, where a singing Golden Oriole had been reported. Although the elusive oriole remained unseen, we enjoyed watching Blackbirds feeding young on the lawns, and listened to a Greenfinch singing nearby.

Later in the afternoon, we made our way back along the road toward the Garrison and the Star Castle Hotel in time to freshen up, before another excellent evening meal.

Day 7

Sunday 10th May

Another fine day dawned over St Mary's, with bright sunshine continuing despite a strengthening north-easterly wind. After breakfast, we walked across Porthcressa Beach before continuing toward Porth Mellon, and then dropped down once more into Lower Moors, where we met local naturalist Rob Hurrell and his research team, who are undertaking studies into freshwater ecology and European Eel populations on the islands. It was fascinating to hear about their work.

From Lower Moors, we continued into Old Town, before following the coastal path along the cliffs toward the airfield. It being a Sunday, there were no incoming flights, allowing us to enjoy the peaceful surroundings before continuing around the clifftops and down to Porth Hellick, where we stopped for lunch on the beach.

Part of the beach had been fenced off to protect nesting Ringed Plovers and, keeping a respectful distance, we set up the telescopes to observe the birds. One adult Ringed Plover was seen anxiously moving away as walkers crossed the beach nearby, underlining the vulnerability of these scarce breeding birds to disturbance.

After lunch, we visited the hides overlooking Porth Hellick Pool. Sightings here included two Little Egrets, a Grey Heron, Gadwalls and Shelducks. Later, the eel research team arrived to recover their nets from the pool, providing further opportunity to discuss their conservation work.

The group later split for the afternoon. Stephen led three guests back to Sandy Lane to search again for the Turtle Doves which some had missed the previous day, while Adrian guided the remainder of the group back around the coast toward Porthcressa. Those accompanying Stephen were rewarded not only with views of the Turtle Dove, but also brief sightings of the Golden Oriole, which had eluded the group previously. Meanwhile, Adrian's group observed a Carrion Crow carrying prey near Porth Minick. Closer inspection revealed it to be a dead baby

Hedgehog. This was a very unusual sight: although Hedgehogs are a well-established introduction on the island, they are not commonly thought of as prey items for crows.

Despite the strengthening wind, conditions remained gloriously sunny, and visibility across the sea was exceptional. Offshore, Manx Shearwaters and Gannets could be seen feeding actively in the roughening waters of the north-easterly gale, bringing another memorable day on Scilly to a close.

Day 8

Monday 11th May

Our final day on the islands began with the group gradually splitting, as some clients prepared to return to the mainland by air to Land's End, while the remainder joined the leaders aboard Scillonian III for the sailing back to Penzance.

After breakfast and farewells at the Star Castle Hotel, we organised our luggage for onward transit, checked out of our rooms, and set off for a final walk across Porth Mellon Beach and out toward Porthloo. Along the upper shoreline, beautiful spring flowers were blooming among the dunes and coastal grassland, while Oystercatchers and Whimbrels fed quietly along the tideline.

At a disused storage area near the top of Porthloo Beach, we spent time watching numerous House Sparrows busily feeding young in nest boxes on the old buildings. Their constant activity and cheerful chatter provided a fitting reminder of one of the enduring sounds of the islands.

We followed the footpath out toward Carn Morval Point alongside St Mary's Golf Course. Arriving just in time to watch Scillonian III approaching St Mary's harbour, it was pleasing to hear members of the group confidently identifying seabirds and pointing out many of the islands within the Scillonian archipelago, which had become so familiar over the previous week. Later, we enjoyed coffee and cake on the outdoor terraces at Juliet's Garden, taking in the magnificent panoramic views over the harbour and surrounding islands one final time.

Back in Hugh Town, the group dispersed for last-minute shopping and lunch, before gathering at the quay to check in for the afternoon sailing back to Penzance. Fortunately, the weather remained fair for the crossing. Although no cetaceans were encountered on the return journey, there were excellent numbers of Manx Shearwaters and Gannets feeding close to the ship. Having passed Wolf Rock Lighthouse, we soon came within sight of the Cornish mainland and the Longships Lighthouse off Land's End. Once sheltered in the lee of the Cornish coastline, the sea conditions became noticeably calmer. Before long, Mousehole and Newlyn slipped past on our port side, and St Michael's Mount appeared ahead of us, as we entered Mount's Bay and approached Penzance harbour.

Docking was straightforward, and once everyone had successfully collected their baggage, final farewells were said before clients departed for home, after what had been an exceptional week exploring the Isles of Scilly in spring.
