Summary

We enjoyed an excellent week in southern Puglia, an area less well known than Gargano but still with a wealth of orchids, especially round our second hotel, where the carpets of Naked Man and Pink Butterfly Orchids (*Orchis italica* and *Anacamptis papilionacea*) were particularly memorable. We had good views of migrating raptors, mainly Marsh Harriers but with a fine Montagu's on the last day and enjoyed the great views of Black Stork and Lesser Kestrel, as well as the fascinating architecture of Matera. The weather was generally fine and sunny, but a very cold wind on a couple of days made some wish they had brought more clothing. With lovely hotels and great company, however, we all enjoyed an excellent trip to Puglia in Spring.

Day 1

Tuesday 1st April

Fly Bari; transfer Otranto

The 12 group members met Jessica & Paul at Gatwick North Terminal for our 12.20pm EasyJet flight to Bari. When we landed, we sorted out the minibuses and loaded up for our journey down the Adriatic coast. As we were leaving the car park, Rose-ringed Parakeets were noisy, and a Barn Swallow flew over the vehicles. As we drove, we enjoyed the evening light and the turquoise of the sea, with a couple of Common Kestrels being noted. We stopped briefly near Brindisi for a leg stretch in the failing light and it was dark when we reached the Hotel Masseria Panareo, our base for the first three nights of the tour. Scops Owls were calling around the hotel. We also received a warm welcome from Alex, the owner, and after locating our rooms, we enjoyed a delicious dinner. We were all tired after a long day's travel, and ready for our beds. Scops Owls called through the night.

Day 2

Wednesday 2nd April

East of hotel; Capo d'Otranto; Otranto

We awoke to a fine morning with some early cloud soon burning off in the warm sun, and were able to appreciate our delightful surroundings, including a Hoopoe heard calling. We gathered at 8am for a delicious breakfast and were ready to leave at 9am. We drove only about a mile, before we stopped to explore a rough grassy and rocky ridge, running inland from the sea. Corn Buntings were singing and gave good views, along with Crested Lark (the southern Italian subspecies *apuliae*) and Zitting Cisticolas with their characteristic song-flight. One was obviously feeding young. Soon after we arrived, we heard Nightingale singing from a dense bush and it was glimpsed as it flew.

The dominant plants were Jerusalem Sage (*Phlomis fruticosa*), with its large yellow flowers, and the not-yet-flowering Shrubby Thyme (*Thymbra capitata*), which scented the air. Pyramidal Orchids (*Anacamptis pyramidalis*) were starting to come out, as well as Pink Butterfly Orchids (*Anacamptis papilionacea*), some Sawfly Orchids (*Ophrys tenthredinifera*) and a Small-flowered Tongue Orchid (*Serapias parviflora*). Pink *Anemone hortensis*, blue Dyer's Alkanet (*Alkanna tinctoria*) and the purple thistle Galactites (*Galactites tomentosa*) were among the many flowers noted, as well as the evergreen bushes of Lentisk, also known as Mastic Bush (*Pistacia lentiscus*), and the tiny holly-leaved Kermes Oak (*Quercus coccifera*). A Moorish Gecko was sunning itself on a wall by one of the minibuses and many Italian Wall

Lizards were becoming more active. Butterflies included Common Swallowtail, Eastern Dappled White, Eastern Bath White, Orange-tip, Small Heath, Clouded Yellow and plenty of Painted Ladies and Wall Browns. Giant Centipedes were under some discarded roofing felt. Swallows and a couple of House Martins were coming in off the sea, and we started to see raptors including several Western Marsh Harriers, Lesser Kestrels, Peregrine Falcon and both Common and Long-legged Buzzard. A Hoopoe was seen briefly on a couple of occasions, and many Hairy Hawker dragonflies were flying.

We moved on, but only the short distance to the Punta Palascia, the tip of the Capo d'Otranto, the most easterly point of mainland Italy, and the point where the Adriatic Sea is said to join the Ionian Sea. We could see clearly the mountains of Albania and also the distant outline of Corfu, both nearer to us than Naples. The first raptor here was a Lanner Falcon. We walked down to the lighthouse, the steep cliffs being sheltered and sunny. A new butterfly here was Common Blue and we also saw the black Carpenter Bees *Xylocopa iris*, half the size of the Carpenter Bee *X. violacea* seen earlier, as well as Black Mining Bees. Again, we had some excellent views of the Italian Wall Lizards, often more or less at eye level on the rocky cliffs. Plants included Myrtle (*Myrtus communis*) with its fragrant leaves, and the striking Figwort *Scrophularia lucida* growing on rocks, together with Prasium (*Prasium majus*) and the endemic *Campanula versicolor*, the latter only showing leaves. Some walked down to the lighthouse, reporting Linnet, others stopped part way and had good views of a male Sardinian Warbler.

We returned to the hotel to eat our picnic on their terrace, enjoying the local wines and cheese from the adjacent farm. After a short break, we gathered at 3pm to visit the city of Otranto. We took the road to the port, parking on the edge of the old town and taking time to explore its narrow streets, the Aragonese castle and city walls, and Cathedral with a fascinating twelfth-century mosaic floor representing the tree of life. Audouin's Gull, Common and Sandwich Tern, Cormorant and Little Egret were reported from the harbour, and a couple of Swifts flew overhead.

We were back at the minibuses at 5.30pm, returning to the hotel with time for R&R before we met at 6.45 to discuss the day. We enjoyed a tasty dinner before retiring to our beds. The Scops Owls were generally further away this evening.

Day 3

Thursday 3rd April

Le Cesine; Beach nr Torre Specchia

We woke to another beautiful morning: one of the group showed photos of the sun rising over the Albanian mountains. Those out before breakfast reported two Nightingales, Hoopoes and Meadow Pipits in the fields and trees by the road junction.

After breakfast we gathered at 9am to drive north to Le Cesine with its Olive groves, lakes, evergreen woodland and sand dunes. This lies further up the coast, so we retraced our steps past Capo d'Otranto, and the two Laghi Alimini, the larger of which is brackish. We parked on a closed-off section of road at Le Cesine and walked along the paved road, where there were carpets of the endemic Stork's-bill *Erodium nervulosum*, with its showy pink flowers. There were large numbers of very fresh Adonis Blues, especially round their food plant of Glaucous Horseshoe Vetch (*Hippocrepis glauca*), which was flowering beautifully along with the endemic Rock-rose *Helianthemum jonium*. The shrubs included pink *Cistus creticus*, white Sage-leaved Cistus (*Cistus salviifolius*),

Mediterranean Buckthorn (*Rhamnus alaternus*) and Lentisk (*Pistacia lentiscus*), while the yellow-flowered Blue Wattles (*Acacia saligna*), although not native, provided patches of bright yellow. Other butterflies included many Eastern Bath Whites, and we also saw Small Whites, Common Swallowtail and Clouded Yellows. There were many Egyptian Grasshoppers, and we managed some close views, seeing the vertical stripes in the eyes. A spike of Field Gladiolus (*Gladiolus italicus*) was just coming into flower. Goldfinches, Sardinian Warbler, Great Tits and Blackcap were mainly heard, as well as very vociferous Cetti's Warblers, and some European Pond Turtles (Terrapins) were basking on a log in a ditch but soon disappeared back into the water.

The path goes through the WWF reserve, where entry is not permitted on either side, but access is allowed through to the sea. We followed it through dense woodland of Aleppo Pine (*Pinus halepensis*), Eucalyptus (*Eucalyptus* sp.) and Evergreen Oak (*Quercus ilex*), noting Ivy (*Hedera helix*) and Smilax (*Smilax aspera*) among the tangled undergrowth. We had some lovely views of Cleopatras, especially round the Mediterranean Buckthorn. There were many large puddles on the path, a couple holding Italian Pool Frogs, one seen clearly; other frogs, probably Italian Hybrid Frogs were very vocal from the lakes. On the lakes we saw Coot, Great Crested and Little Grebes and a single Mallard; the water level perhaps being too deep for any waders. A Kingfisher shot past and was seen by some, while distant Grey Heron, Great and Little Egret were also seen. In a couple of grassy areas were Annual Daisy (*Bellis annua*), but there were signs of extensive Wild Boar activity where sometimes we have found orchids. Two Western Whip Snakes were encountered, one very long, both of the subspecies '*carbonarius*', being totally black in colour.

We retraced our route to the minibuses, where we enjoyed another tasty picnic. Afterwards we explored the nearby vegetation, finding plenty of Early Spider Orchids (*Ophrys sphegodes*), a pale-pink Sainfoin (*Onobrychis alba* subsp. *echinata*) which held a bright-yellow Crab Spider, and Mediterranean Kidney Vetch (*Anthyllis vulneraria* subsp. *rubriflora*) amongst other species.

We set off back south along the coast, stopping at an area of beach north of Torre Specchia, where we explored the road verge and the shore, and some paddled. On the sandy beach edge, we admired the patches of blue 'Afternoon Iris', Barbary Nut (*Moraea sisyrinchium*) and pink *Silene colorata*, as well as Cottonweed (*Achillea*, formerly *Otanthus maritima*) and Sea Stock (*Matthiola sinuata*). On the verge was one spike of Apulian Ophrys (*Ophrys holosericea* subsp. *apulica*) and a just-emerging spike of a dark-red Broomrape *Orobanche sanguinea*. On the shore we also noted the strange balls (egagropili) which are composed of the compressed leaf-bases of the Neptune-grass (*Posidonia oceanica*). The sea was an amazing turquoise, and we could see Scopoli's Shearwaters enjoying the strong wind, catching the sun as they banked high. Several gulls were seen, including a couple of definite Audouin's Gulls.

Back near the hotel a Marsh Harrier was seen and, later, a ring-tail Harrier species was seen by some rather distantly. At the hotel we updated our checklists and enjoyed another fine meal. The Scops Owls continued calling, as ever.

Day 4

Friday 4th April

Capo d'Ortranto; transfer Parco delle Querce; hotel grounds

Today we were leaving the Masseria Panareo. Those out early, reported Northern Wheatear, a black-headed Yellow Wagtail of the *feldegg* race of the Balkans, as well as Nightingales and Hoopoes. After a final delicious breakfast, we packed up and left just after 9am. The sun was already hot, although the wind was still quite strong. We stopped

on the ridge, seeing a smart Woodchat Shrike. Several small Moorish Geckos were on the wall, and more Giant Centipedes were seen, as well as Baton Blue butterfly. We moved on to the lighthouse where we saw a female Wheatear and then a male Wheatear on a lamp post which may well have been Western Black-eared, but against the light and in the wind, it was not possible to be certain.

We continued our journey northwards via Lecce and Brindisi, with a stop for coffee near Latiano. We then left the main road at Grottaglie, cutting across country to Crispiano and the minor road to our next hotel, noting the golden Spiny Broom (*Calicotome infesta*) in flower along the way. We arrived at the Parco delle Querce just before 1pm, receiving a warm welcome. We ate our picnic in the courtyard and settled in, before gathering to explore the hotel grounds.

The short vegetation was full of flowers, and we soon found some amazing orchids: masses of Early Spider Orchids (*O. sphegodes*), Bertoloni's Bee Orchids (*Ophrys bertoloni*) and hybrids between them (*Ophrys x flavicans nm. bertoloniiformis*), with a variety of greenish-pink sepals and petals and sizeable specula on the lips, and Naked Man Orchids (*Orchis italica*). Our orchid-fest continued with Yellow Bee Orchids (*Ophrys lutea*), the smaller *Ophrys lutea* subsp. *galilea* with brown marks into the yellow ('bunny-ears'), more Apulian Ophrys (*Ophrys holosericea* subsp. *apulica*), Sawfly Orchids (*O. tenthredinifera*), spikes of the early-flowering Giant Orchid (*Himantoglossum robertianum*), with some flowers still just alive, Green-winged Orchids (*Anacamptis morio*), Pink Butterfly Orchids (*A. papilionacea*) and their hybrids (*A. x nicodemi*), showing a range of intermediate characteristics. We didn't know where to look or tread! Pennyroyal (*Mentha pulegium*) scented the air, and we noted the tiny white-and-orange Toadflax *Linaria reflexa*. We walked through scrubby woodland of Macedonian Oak (*Quercus trojana*) with abundant Spiny Broom, only just starting to flower. Butterflies included Italian Festoon, numerous Eastern Bath Whites, Clouded Yellows and Painted Ladies. There was not much apparent bird life, but an overhead raptor was decided to be a dark-morph Booted Eagle. Black Redstarts were around the hotel building.

We wandered back when we were ready and met to update our lists before a welcome drink at 7pm, followed by dinner in one of the trulli, the conical buildings characteristic of this part of Puglia, four of which were a farmhouse and are now the hotel dining room.

Day 5

Saturday 5th April

Gravina di Laterza

Our destination today was the Gravina di Laterza, a deep canyon in the limestone plains almost on the border with Basilicata. It is managed by LIPU, the Italian equivalent of the RSPB. Those out early enjoyed the Black Redstarts, and White Wagtail and a Marsh Harrier were reported before we left. After breakfast we made up individual picnics and were ready to leave at 8.45am.

We took a cross-country route along the ridge of hills. We made a stop at a road junction of two unclassified roads near Croce Grande, with some nice specimens of *Iris pseudopumila*, a dwarf pale-lemon iris with brown on the falls; this occurs in Puglia and Sicily and can have a purple form, but the majority of Apulian plants are lemon. There were more orchids here and butterflies enjoying the morning sun included Southern Grizzled Skipper, Mallow Skipper and Green Hairstreak. A Raven was heard and one bird seen distantly. As we continued, we saw Northern Wheatear and then a lovely Little Owl, perched on a wall. We were faced with a road closure notice which would

have meant a very lengthy diversion but, fortunately, a local came the other way and said the road was passable (it might not have been during the week when men were working). We skirted Mottola and picked up the SS7, part of the Appian Way from Rome to Brindisi, turning off to Laterza, with the reserve on the edge of the town.

We parked up and walked to the first viewpoint over the gorge. Black Kite was overhead and we had multiple sightings of Common Kestrel and Common Buzzard, but no Lesser Kestrels today. Sardinian Warblers were vocal and sometimes seen, along with Great Tit, Long-tailed Tits, Chiffchaff and Robin, but birds were generally scarce. We could hear frogs calling from the river below, probably of the Italian Hybrid Frog complex. Butterflies included Scarce Swallowtail, a very confiding Common Swallowtail which perched briefly on shoes and arms, Cleopatras, Holly Blue and Wall Brown, and Italian Wall Lizards were a constant presence.

The path wound through wooded and open areas. The taller vegetation included Macedonian Oak (*Quercus trojana*), Montpellier Maple (*Acer monspessulanus*) and Prickly Juniper (*Juniperus oxycedrus*), and abundant Narrow-leaved Cistus (*Cistus monspessulanus*), not yet in flower. Further on, we also saw Terebinth Trees (*Pistacia terebinthus*) with their reddish young foliage, and Eastern Hornbeam (*Carpinus orientalis*). There was a scattering of fine orchids, with a nice Small-patterned Ophrys (*Ophrys holosericea* subsp. *parrimaculata*) and a new one was Tongue Orchid (*Serapias lingua*).

We heard and then had good scoped views of Blue Rock Thrush. We also saw a Black Stork in flight and later were treated to superb fly-pasts. We watched it as it circled lower in the gorge and landed by the river, where it was feeding. While we were enjoying our picnics in the warm sun, we also saw another one perch on a rocky outcrop. Eventually it was joined by another bird, maybe a third individual and they flew off together down the gorge. Apparently, this year there are two pairs in the gorge, and we were extremely fortunate to have such wonderful views – a real treat!

We returned to the visitor centre, where Manuel, the ranger, explained a little about the gorge and its wildlife and showed is a short video. Some also watched a second one about the Egyptian Vulture reintroduction scheme: there used to be a pair of vultures in the gorge, and they hope that they will return one day.

We took a different route home, along the bottom of the ridge, getting back to the hotel by about 4.30pm, with a Red Fox being seen in the hotel grounds. A Common Redstart was reported as well as the Black. After a break, we met at 7pm to update the checklists, before enjoying another tasty meal.

Day 6

Sunday 6th April

Bosco delle Pianelle; local roads

We woke to another sunny day, but with a forecast of afternoon rain. The early birders reported both male and female Eastern Subalpine Warblers and a pair of Hoopoes, as well as the Black Redstarts.

Our destination today was local, only a couple of miles away as the crow flies, but further by road. The Bosco delle Pianelle is a wood in a doline or collapsed cavern, with the path starting at a higher level and gradually descending. We parked at a back entrance to the wood (away from the visitor centre area, which was already getting busy) and set off walking the path into the wood. The trees here were mainly Holm Oak (*Quercus ilex*), most of which were

younger or had once been coppiced, as well as some Downy Oak (*Quercus pubescens*). We noted deep-blue Purple Bugloss (*Aegonychon purpurocaeruleum*), surprisingly growing in a crevice in a rock, and plenty of the mauve Spring Rock-cress (*Arabis verna*), along with Bifid Dead-nettle (*Lamium bifidum*) and the leaves of the autumn-flowering Ivy-leaved Cyclamen (*Cyclamen hederifolium*). We then took a path up into a more open area, where there is a semi-ruined trullo, once used by charcoal burners. We could see the structure of the building, and plants on the wall included Rustyback fern (*Asplenium ceterach*). In the surrounding 'meadow', now encroached by shrubs, were carpets of *Anemone hortensis*, a few *Iris pseudopumila*, and more Green-winged and Pink Butterfly Orchids, plus hybrids.

We walked back into the wood, admiring an old, uncoppiced Holm Oak, and an Eastern Bath White resting on a tree trunk. As we got lower, the vegetation changed to mainly the deciduous Eastern Hornbeam (*Carpinus orientalis*) and we started to see ferns: Irish Spleenwort (*Asplenium onopteris*), Intermediate Polypody (*Polypodium interjectum*) and Maidenhair Spleenwort (*Asplenium trichomanes*). Birds were exceedingly quiet, but we heard Common Buzzard and Great Tit. At another specimen tree of Holm Oak, we had a break before taking the uphill path, diverting to a viewpoint from which we could see the doline and the vegetation layers. A distant Raven was circling. We then returned by another, more open path through the wood, finding several spikes of pale lemon Roman Orchid (*Dactylorhiza romana*).

We had our picnic on a bank by the minibuses, seeing a curled-up young Western Whip Snake, and a very fresh Brown Argus was photographed. Blue Tit and Long-tailed Tit were seen, and the bank held plenty of now-familiar orchids. The cloud was building as we ate, and the first rain drops fell as we were finishing the tidying up, but the shower did not last long. We drove north, stopping to look at two trulli, one white-washed, the other 'au naturel'. There was a nice stand of Small Yellow Bee Orchids on the access lane and cornfield 'weeds' included Corn Cleavers (*Galium tricornutum*) and Large Venus's Looking-glass (*Legousia speculum-veneris*) amidst swathes of lush Field Marigold (*Calendula arvensis*). We drove past more trulli, some being used as houses, others as barns. We stopped again at a road verge with more orchids although nothing new, but the wind was now strong and cold, so we did not linger. Back at the hotel, there was plenty of R&R time in the warm, before lists and dinner.

Day 7

Monday 7th April

Murgia Materana; Matera

We woke to a fine morning but with a very cold and strong wind. Because of a function the previous day in the hotel, we had to park further round and Paul, going to fetch his vehicle shortly after 8am, encountered a Wolf by the wall edging the car park! A little later a second animal, young and rather mangy was spotted by the rubbish bins. Wolves are spreading in Italy and apparently, they have been seen before round the hotel, but we were not aware of it.

We left at 8.30am, with as many extra layers of clothing as possible, our destination being the ancient city of Matera, just over the border into Basilicata. We retraced the route we had taken on Saturday, continuing on and seeing good numbers of Lesser Kestrels over the fields. We turned up on to the rocky plain (murgia) that lies east of the ravine that forms Matera, parking at the Visitor Centre. Black Kites flew overhead, and we saw both Common and Lesser Kestrel and could start to notice the differences between them. We walked towards the ravine, battling the bitterly cold wind. Along the rocky road edge plants included the bright-blue Flax *Linum squamulosum* subsp. *tommasinii*, found in Puglia and Slovenia, the endemic yellow Rock-rose *Helianthemum jonium*, as well as the smaller-

flowered Hoary Rock-rose (*H. canum*) and Giant Fennel (*Ferula communis*). We found a few communal nursery webs with caterpillars of Franconian Lackey. From the plain we could look across to Matera and see the ancient cave dwellings, mostly now restored, with more modern buildings on top of them. We walked along the edge of the ravine, finding a new orchid for the week: Sombre Bee Orchid (*Ophrys fusca*). We also saw a Black Stork (a first here for the leaders) which circled low into the ravine and could look down on Black Kite. We looped round in a small valley, glimpsing a Blue Rock Thrush silhouetted but then, where it was more sheltered, having superb views of the pale-throated form of Eastern Black-eared Wheatear. Jill and Jane, back at the Visitor Centre, reported Swallowtail butterfly and Hummingbird Hawk-moth, as well as all the Lesser Kestrels.

We then drove round into the centre of Matera, parking in the modern area before walking down to the sassi, where we had a delicious lunch in a cave restaurant by the gorge. Afterwards there was time to explore, with some visiting the ancient rock-cut churches, the cathedral, the museum or just wandering the alleys. The bottom of the ravine was alive with enormous numbers of Swallows, House Martins and numerous Common Swifts, feeding where it was sheltered, and we also saw more Lesser Kestrels: Matera holds Italy's largest colony. We gathered in the main square at 4.15pm to walk back to the minibuses, being back at the hotel by about 6.20pm.

After a break, we met at 7.20pm to discuss the morrow before a final, tasty dinner in the trulli, after which we updated the checklists.

Day 8

Tuesday 8th April

Pools near Gioia delle Colle; fly Gatwick

With a late-afternoon flight, we were able to have time to visit another site en route to the airport. After breakfast, we made up a picnic roll for lunch and were ready to leave at 9am. After a group photo and having thanked the staff who had looked after us so well, we left to drive towards Mottola to pick up the SS100, turning off just north of Gioia delle Colle to visit some water-treatment pools just off our route. The wind was still very strong and cold, with a maximum temperature of 11°C, but feeling much less unless we found shelter.

A flock of Western Yellow Wagtails were flitting around, including very smart males showing several races including black-headed *feldegg* race of the Balkans, the blue-grey Ashy-headed *cinereocapilla* of Italy, and *flava* of Central Europe. Swallows and House Martins were feeding low. We also had good views of a couple of Wood Sandpipers and Common Greenshanks, but the more surprising species was a pair of Sacred Ibis, an alien species which is spreading rapidly throughout Italy from a first breeding record in the north-west in 1989; birds are thought to have been escapees or deliberate releases from captivity but the species is now considered a threat to native species as they feed on amphibians and young birds. An interesting plant was the endemic Apulian Arum (*Arum apulum*) in fine condition. We also had some excellent views of Kingfisher, a couple of Marsh Harriers and, just before we left, a very smart male Montagu's Harrier.

We left at 1pm, with time to warm up with hot drinks in a nearby café before completing our journey to Bari airport, arriving just after 2.30pm, with Jessica and Paul staying on to lead a second group. Having collected our bags we said farewell, after a very enjoyable week in Puglia.
