### Day 1

# Saturday 28th April

Fly UK to Palma - transfer to Pollenca Bay Hotel

The group arrived from Newcastle after a delayed flight, but we were soon on our way across Mallorca, impressed by the quality of the roads and the occasional distant kite.

The hotel is divided from the beach by a busy road, but hidden behind groves of tamarisk and high hedges of fragrant *Pittosporum tobira*. We found our rooms then met up in the bar for a quick chat about the forthcoming week. As the hotel backs straight on to S'Albufereta marsh, we were able to meet up after supper for a preliminary look at the local birdlife. The mosquitoes were biting, but we still had first encounters with Night Herons, Marsh Harriers, Stone-curlews and Black-winged Stilts.

# Day 2

# Sunday 29th April

Bocquer Valley and south S'Albufereta Marsh

Some of the group leapt out of bed to meet Andy for a little birding before breakfast. They were rewarded with a good array of waders including a lovely Stone-curlew and a magnificent flypast by six Flamingoes in close formation with the sun glinting off their feathers.

After breakfast we went to the Bocquer valley where the first bird of note was a Wryneck in the olive trees, followed by a couple of lovely Blue Rock Thrushes perched on posts near the finca. Although the weather was cloudy with a strong breeze, several raptors were seen including a male Peregrine, two light phase Booted Eagles and some Ravens were seen.

Meanwhile the plant hunters were finding everything was new, starting with a large pale *Echium italicum* and followed by a host of new plants including the endemics *Astragalus balearicus* (a spiny little cushion with insignificant flowers), *Hypericum balearicum* (a shrubby evergreen St John's Wort) and the low growing *Rosemarinus ericalyx*. Much of the hillside was covered by *Smilax aspera ssp. balearica*, not the most attractive of plants, but too tough for goats.

Lunch was taken in the car park, where several of the group decided to do a little light litter picking to improve it for the next visitors. Then we made a short transfer to S'Albufereta marsh. An initial glance round the quarry where we parked threw up some magnificent *Ornithogalum arabica*. Then the group split with most going to a raised platform where they saw Great Egrets, and then a hide where they saw their first Red-crested Pochards, Curlew Sandpiper and Audouin's Gull.

The plant hunters meanwhile found some very good specimens of *Ophrys speculum*, the Mirror Orchid and some *Anacamptis pyramidalis*, the Pyramidal Orchid, but much thinner and paler than we are used to in the UK. The ubiquitous *Galactities tomentosa* added a wash of mauve to the fields around, neatly offsetting the yellow of the

vetches and deeper purples of *Gladiolus italica*. The group finally met up again to hear tales of an Iberian Woodchat Shrike.

### Day 3

# Monday 30th April

### Cuber Reservoir and Lluc Monastery

Those that made it out of bed for early birding with Andy were rewarded with a Green Sandpiper, several Night Herons, Little Stint, two Curlew Sandpipers, Kentish Plovers, Little Ringed Plover and Spanish Wagtail, the Iberian form of Yellow Wagtail.

After breakfast we set off to the mountains, wending our way past gaily coloured shoals of lycra-clad cyclists. The views were spectacular for all but the drivers, who needed to keep their eyes firmly on the road ahead. After parking in the car park, we were scarcely out of the vehicles when we had a wonderful view of a Golden Eagle soaring over the ridge, quickly joined by Cinereous (previously called Black) Vultures.

Botany was very thin in this area due to the combined efforts of donkeys, cows, sheep and goats, so other than some rather chewed hussocks of Stipa, the plants were minute and mainly too small to identify. *Euphorbia characias*, too poisonous to be eaten even by goats, and Smilax which was too prickly, were about the only things to be seen.

The birders were having more luck, spotting the elusive Tawny Pipit and gaining very good views of Nightingales and Blackcaps in the woods. When we reached the dam we had good views of Mediterranean Flycatchers and a Cirl Bunting, while Andy picked up Griffon and Cinereous Vultures in his telescope.

The botanists were rewarded for their patience with dainty groups of *Cyclamen balearicum* in the fissures of the rocks rising up from the far side of the dam. There was also a beautiful colony of white felted Rustyback fern *Asplenum ceterach*, some club moss and sellaginella. Botanising through binoculars, we spotted some orchids high up on the cliff face; a tantalising glimpse of what might have been with less livestock.

After lunch, taken at picnic tables by the car park and accompanied by Chaffinches, we descended to Lluc to visit the monastery. Several of the group glimpsed Firecrests and we also saw Nightingales and Blackcaps. The botanic garden was not very exciting, though it did have nice little water rills running around it.

The evening birders had a heron night, seeing five Night Herons and three Grey Herons, plus some Little Ringed Plovers.

# Day 4

# **Tuesday 1st May**

#### Formentor Peninsula and S'Albufereta Marsh

The day started off cold and wet, but those that made it out to the marsh before breakfast were rewarded with hundreds of Swifts, Purple Heron, two Wood Sandpipers, lots of Common Sandpipers, quarrelling Black-winged Stilts, Ringed Plover, three Curlew Sandpipers, one turning into lovely summer colours, and another Spanish Wagtail with white throat and eye stripe.

Determined to get on the road before the cyclists, we set off early and had a clear run out to the lighthouse. On the way we saw some lovely little pink foxgloves. Unable to stop because of the precipitous nature of that bit of road, we later identified these as the endemic *Digitalis dubia*.

At the lighthouse we were treated to a spectacular display of shearwaters. At least two hundred Balearic Shearwaters and more than a hundred Scopoli's Shearwaters were feeding close in: skimming the waves, diving and turning, to our huge delight. Everyone was able to tell the difference between the neat little dark Balearic Shearwater and the larger paler Scopoli's Shearwater by the time we left. For many, it was the highlight of the whole trip. Views of Peregrine and Blue Rock Thrush paled into insignificance.

Meanwhile the botanists, regarding the arid rocky landscape, where amazed to find that a small prickly cushion was in fact a dandelion *Launaea cervicornix*. Next find was a tiny little two-toned daisy with the magnificent name of *Senecio leucanthemunifolius ssp. rodriguezii*, and finally a tiny catchfly *Silene sedoides* tucked in between boulders.

Stopping off on the way back along the peninsula at Casa Vellas we saw Kestrel, Goldfinch and Mediterranean Flycatcher, while the botanists turned up Gordon's favourite plant *Blackstonia perfoliata* and the pretty pink *Convolvulus cantabrica*.

We drove back to the Roman quarry at S'Alburfereta for our picnic, where we sat around on rocks conveniently situated at the right height. While we were eating we noticed an Orobanche which had escaped us at the last visit – *Orobanche minor*. We then went to the northern end of S'Albufereta marsh where we saw Gadwall on the pools, a Little Grebe and some Common Sandpipers. Lots of Cetti's Warblers were calling and a Nightingale showed itself clearly. The path was strewn with flowers and some of the group came across their first Bee Orchids *Ophrys apifera*, in both normal and white form. Then the rain came down so we dashed back to the vehicles.

# Day 5

# Wednesday 2nd May

#### S'Albufera

There was no time for early birding today as we needed to get off early to the reserve to secure parking places for the minibuses. After driving past miles of tourist hotels and shops, we arrived at the car park and got the last two spaces.

A Little Bittern flew past as we walked up the track past the elegant bridges and canals at the entrance. Some of the group had excellent views of Night Herons and Little and Cattle Egrets in the trees, but others were too busy identifying their first Bug Orchid *Orchis coriophera fragrans*, and making sure that it did indeed have a vanilla scent. The track to the information centre was scattered with Bee Orchids, and we had great views of Western (previously called Purple) Swamphen paddling around between the reeds. The bridges were covered in silver *Phagnalon sordidum*, but most of the vegetation was Phragmites. At the visitor centre, those not checking out the facilities were treated to a glide-by from an Eleanora's Falcon.

The first set of hides turned up lots of waders, Marbled Duck and a nice pair of Stone-curlew, plus a lovely display from a Yellow Wagtail. The astonishing sight of a Golden Eagle being mobbed by a Marsh Harrier, and having a good look at the only two surviving Red-knobbed Coots, gave everyone something to think about over lunch. There were also glimpses of a Great Reed Warbler and plenty of chances to hear them singing.

The second two hides, reached by passing a lovely Rosa sempervirens, provided a wealth of waders including charming Avocets with fluffy little chicks, Spotted and Common Redshanks, Ruff and Little Stint, and to top it all, an Osprey. The botanists walked down to the sea and found swathes of Bug Orchids Cistus salvifolius and some interesting plantains.

After supper Pip took a group to the beach to see what was growing there. We found Sea Stock *Mattiola sinuata*, Sea Bindweed *Calystegia soldanella*, Rock Samphire *Crithmum maritinum*, Sea Rocket *Cakile maritime*, *Helichrysum ambiguum* and *Baratsia trixago*, with some nice Bladder Campion *Silene vulgare* on the other side of the road. The beach was scattered with hairy little balls like big kiwi fruit, which turned out to be *Posidonia oceanic*, part of the Eelgrass which covers the beach. Meanwhile, the evening birders saw large numbers of Barn Swallows over the marsh, a Squacco Heron on the far pool and, as they walked away, a European Nightjar churred.

# Day 6 Thursday 3rd May

Salinas de Levante and south Mallorca

Early morning again found hundreds of Barn Swallows over the marsh, now joined by the odd House Martin, and the noise of a squealing Water Rail was heard.

It was a glorious day for our trip to the south of the island. Our first stop was at Es Cruce Service Station where many locals were consuming plates of barbecued meats, some accompanied by alcoholic drinks including brandy. We stuck to coffee, but did discover some very large Orobanches in the car park.

Turning onto narrow country lanes, our first stop was to find larks. Only people in one minibus saw Thekla Lark, but there were good views of Short-toed Lark and a singing Corn Bunting. We also found the remains of some Giant Orchids *Himantoglossum robertianum*, plus some different Asparagus and Erodiums.

At the salt pans we were serenaded by Turtle Doves, Golden Orioles and Hoopoes while we ate our lunch. The Turtle Doves were carefully identified, the Hoopoes dust bathed, and the Golden Oriole was glimpsed by a few. On the salt pans were multitudes of Shelduck, as well as Black-winged stilts, Avocets and Kentish Plovers. The Botanists scoured the field where we had our lunch and turned up Scorpion Vetch *Scorpiarus muricatus*, the strange *Plantago afra* that bears no resemblance to any other plantain, and some nice mallows. In the salt marsh were lots of different salt tolerant shrubs including Sea Lavender and Samphire.

Wending our way gently back, we passed through the town of Campos which was full of swooping House Martins. A narrow twisty track led us up to a castle perched high on a rocky outcrop. Here we watched a lovely pair of Booted Eagles playing in the thermals, saw numerous busy brown Crag Martins entering their nests in the cliff, and had a couple of glimpses of Alpine Swift zipping past at speed.

The evening birders had a brief glimpse of Eleanora's Falcon hunting in the twilight amongst the bats and Night Herons.

Day 7 Friday 4th May

Southern end of S'Albufera (S'Illot and Depudora)

The weather forecast was for rain, and quickly it proved to be correct. However the early birders had a great morning, spotting six Kentish Plovers, six Ringed Plovers, a Stone-curlew, five Black-winged Stilts, a Grey Heron, six Common Sandpipers, four Gadwall and four Redshanks.

After breakfast we parked by the last hotel before S'Illot and walked to the site along a path by the road. At the first S'Illot pond we saw lots of Swallows and Sand Martins flitting low over the water, two Marbled Ducks, Common Pochard, Little Grebe, Coot with chicks, Red-crested Pochard with chicks and Gadwall with chicks. The track into the marsh was lined with magnificent Bee Orchids in every shade from purple to white, and with every marking imaginable. At the head of the track, the botanists plunged through the brambles into a wet meadow covered in orchids, while the birders found Cetti's Warbler, Linnets, Sardinian Warblers and a Moustached Warbler. There was lots of Nightingale song, and a few distant Bee-eaters were seen.

Lunch was at the Depudora Platform, where we watched hundreds of Swifts, Zitting Cisticola, four Common and three Whiskered Terns, two Red-rumped Swallows and a Greenshank. However as the rain was getting heavier and the mosquitoes were biting, we headed back to the hotel to dry out.

After a change of footwear, some of the group went with Pip to explore the lanes at the back of the marsh behind our hotel. They ended up in Pollenca, exploring the narrow streets and window shopping in the town's squares. A Golden Eagle was spotted from the top of the town by the tiny church, and a huge Orobanche was seen in an orchard on the way back to the car park.

Day 8 Saturday 5th May

Transfer to airport and return to UK

A very early flight meant a 3.30am start for all, and a night drive to the airport. Not a bird was stirring. We flew back to the UK where the tour ended.
